Meet Paul Szep, the Kerry Packer of blind cricket, who is set to change the way the game is played since its creation 100 years ago.

Just like the media mogul who famously invented day-night cricket in the late 1970s, NDIS participant Paul is transforming the game after creating a world-first beeping cricket ball.

Paul, legally blind from the age of 3, has spent the past few years developing a beeping cricket ball that is increasing participation among blind and low-vision players.

His community cricket club in south-east Queensland, the Blind Bats Inc, trialled the beeping ball last summer in a charity match and it proved a success.

"It's giving people without sight a whole lot of information they never had before in terms of where the ball is and what it is doing," Paul, 67, said.

"Before beep cricket, there would be fielders flailing their arms about trying to find the ball.

"Our theme is inclusion in the community. We cater to everyone.

"It's for people with all levels of sight, aged between 13 to 70 years."

A microchip inside an oversized cricket ball beeps when in motion, but also when it stops, making fielding easier.

Paul now wants to spread the game nationally, with a beep cricket competition in each capital city.

However, like Packer's bold plan to change the game in the 1970s, Paul is experiencing his share of doubters too, not that it's going to stop him.

"A few officials said that they're not interested," Paul said.

"Well, the governing body weren't initially interested in Kerry Packer's World Series Cricket idea back in the 70s either.

"He proved them wrong - I plan to do the same."

Born with full sight, Paul contracted pink disease, or acrodynia, when he was 6 months old, a condition which caused a skin discoloration.

"The medication to relieve that disease caused my skin to go back to normal, but I ended up with an eyesight problem," Paul said.

---

“I had 15 per cent vision in one eye, none in the other.”

He recalled trying different sports at school, including rugby league and cricket, but he had difficulty keeping track of the ball.

“It was like playing brandy – I would be getting tagged all the time.”

A friend would later introduce Paul to blind cricket while living in Sydney and he hasn't looked back.

The former New South Wales and Queensland wicketkeeper is now using his NDIS supports to build his capacity.

Paul uses assistive technology as part of his NDIS plan, including a closed-circuit television (CCTV) magnifier to help with reading and writing.

He also receives help with home and garden maintenance, as well as a transport allowance, since joining the NDIS in 2018.

Previously, Paul had to rely on his own funding, as well as support from family and friends to achieve his goals.

Blind cricket was first played in Melbourne in 1922, when an audible 'ball' was made from rocks inside a tin can.

Now beep cricket is threatening to do for the sport what playing in coloured uniforms under lights did in the late 1970s – change it forever.

The Blind Bats, based at Morayfield, north of Brisbane, hosts come and try beep cricket days every Sunday.

Teams are made up of 3 fully sighted and 8 vision-impaired players, plus a 12th man.

The club also hosts other beep ball sports including softball, soccer, touch football and hockey.
